

ILLICIT DISCHARGE & IMPROPER DISPOSAL REPORTING

Help Protect Our Community's Waterways

WHAT IS AN ILLICIT DISCHARGE?

Anything other than rainwater entering a storm drain or canal. This includes:

- Dumping chemicals, paint, oils, or wastewater
- Leaking pipes or hoses connected to storm drains
- Dumping yard waste or trash into storm drains

These activities harm our environment, damage infrastructure, and pollute our waterways.

SIGNS OF AN ILLICIT DISCHARGE

- Be on the lookout for:
 - Strong or unusual odors near drains
 - Oily sheen, foam, or discoloration in water
 - Stains or residue around storm drain inlets
 - Someone dumping liquids into a drain
 - Pipes or hoses connected where they shouldn't be

WHY REPORTING MATTERS

- Illicit discharges can:
 - Contaminate lakes, canals, and beaches
 - Harm wildlife and marine life
 - Create public health risks
 - Lead to costly repairs and flooding issues

TOGETHER, WE KEEP OUR WATER CLEAN

Our stormwater system is designed to carry rainwater only. With your help, we can prevent pollution and protect our community's natural resources.

Submit your report through the Stormwater Pollution Hotline using the listed contact options:
